New Flexible Inspection Scope Visual Instrument Inspections Made Easier

April 4, 2017 - Healthmark has announced the newest addition of the Flexible Inspection Scope to their Prosys Optical Inspection line of products, The FIS-003.

The FIS-003 features a longer 110cm flexible shaft with graduation marks. Like other Flexible Inspection Scopes it also includes a distal tip composed of a light source and camera lens at the end of the flexible shaft. Designed for instruments 2.4mm in diameter or larger, inspection is now easier on the interior of instruments with small diameters, including many flexible GI endoscopes. The camera and light are powered by the USB connection on a PC.

Compatible with Windows 7, 8 and 10, the included software allows viewing and recording from most computers. Paired with the optional Flex Arm, the Flexible Inspection Scope can be securely fastened to workstations to free both hands for manipulation of the scope and the target medical device. It is the perfect tool to visually inspect lumened medical devices after cleaning.

About Healthmark Industries Co., Inc.

Since 1969, Healthmark Industries Company, Inc. has developed and marketed innovative solutions to aid healthcare facilities in their delivery of surgical instruments and other life saving medical devices to patients. Healthmark Industries mission is to continue to innovate, continue to support and continue to serve the healthcare provider industry and support services that make it possible to deliver quality healthcare.
