Automatic Sampling for Channel Check

Fraser, MI, May 24th, 2017 - Healthmark has announced the ACF-001 to its Endoscopy product line.

The ACF-001 is designed to inject specific volumes of water through channels of flexible endoscopes and other lumened devices when testing with the ChannelCheck™. It will not only automate the injection of water for sampling, but allow sampling of the entire suction/biopsy circuit of flexible endoscopes - even when laying horizontally. The ACF-001 comes with one solution source tube, a large and small delivery tube, as well as the following selectable sampling solution volumes: 7mL, 10mL and 20mL. The compact unit is equipped with a two-position selector switch for choosing the correct delivery tube line, and features an easy to navigate digital display screen. It also includes mountable hardware, a 250 mL graduated cylinder and an endoscope channel block.

About Healthmark Industries Co., Inc.
